OTDR

OTDR-mode enables you to measure distance, loss, reflectance, attenuation, ORL and sum on an optical fiber. When operating Auto-mode, test is automatically done without additional setting. The test results can be stored in 3 types of format (image, SOR, PDF).

SOLA

SOLA (Smart Optical Link Analyzer), an application that simplifies the measure process, shows you an accurate test results by utilizing advanced algorithm and optimal multiple pulse width. You don't have to set complicated parameters, which means even unskilled workers can make measurement with great ease.

VFL

VFL (Visual Fault Locator) visually identifies the location of bending point, faulty connector or splicing point by emitting a bright red laser (it can reach a maximum of 10km), and this is a must function that workers need on the field.

FIBER INSPECTION

Testing fiber end face on connectors with FIBER MICROSCOPE is very important, because a polluted or damaged connector can cause critical damage to test results as well as testing port.

FILE MANAGER

File Manager can provide powerful file management that users can manage their files conveniently

LIGHT SOURCE

Invisible light source (1310/1550/1625nm live port) can provide the following sources of light: CW, 1kHz, 2kHz modulated and 1kHz & 2kHz blink.
